

CLAIMS

1. Relockable, rectangular folding box, comprising a front side panel (1), a rear side panel (3), as well as two side panels (2, 4), a bottom closure (20) formed by two bottom closing flaps (11, 31) and two dust flaps (21, 41), a closure (30) formed by two closing flaps (12, 32) and two dust flaps (22, 42), characterized in that an insertion tab (5) is laterally hinged to the side panel (4), and that the side panel (1) features an area (13) that is to be removed via a perforation (113), with the insertion tab (5) being glued outside or inside to the perforated area (13).
2. Relockable, rectangular folding box, comprising a front side panel (1), a rear side panel (3), as well as two side panels (2, 4), a bottom closure (20) formed by two bottom closing flaps (11, 31) and two dust flaps (21, 41), a closure (30) formed by one closing flap (12) and two dust flaps (22, 42), a two-layered hanger (50) that is formed by gluing together two hanging tabs (33, 34), with each tab containing one hanging arrangement (37), characterized in that the hanging tab (33) is hinged to the top of the front (1) or the rear side panel (3) and the hanging tab (34) is hinged to the hanging tab (33), an insertion tab (5) is laterally hinged to the side panel (4), and the side panel (1) features an area (13) that is to be removed via a perforation (113), with the insertion tab (5) being glued outside or inside to the perforated area (13).
3. Folding box according to claim 2, characterized in that the hanging tab (33) is hinged via a cover flap (32) to the top of the front (1) or the rear side panel (3).
4. Folding box according to claim 2, characterized in that the hanging tab (34) is hinged to the closing flap (12) instead of to the tab (33).
5. Folding box according to claim 3, characterized in that the flap (32) has at least half the width, preferably a width in the range of 0.55 to 0.6 of the closing flap (12).

6. Folding box according to one of the previous claims, characterized in that the dust flaps (41, 42) have edges (411, 421) rounded toward the side panel (1).
7. Punched blank for producing a relockable, rectangular folding box according to claim 1, the blank comprising a front side panel (1), a rear side panel (3), as well as two side panels (2, 4), laterally hinged to one another, two bottom closing flaps (11, 31) and two dust flaps (21, 41) hinged to the bottom of the side panels, two closing flaps (12, 32) and two dust flaps (22, 42) hinged to the top of the side panels, characterized in that an insertion tab (5) is laterally hinged to the side panel (4), and the side panel (1) features an area (13) that is to be removed via a perforation.
8. Punched blank for producing a relockable, rectangular folding box according to claim 2, the blank comprising a front side panel (1), a rear side panel (3), as well as two side panels (2, 4), laterally hinged to one another, two bottom closing flaps (11, 31) and two dust flaps (21, 41) hinged to the bottom of the side panels, one closing flap (12) and two dust flaps (22, 42) hinged to the top of the side panels, characterized in that a hanging tab (33) is hinged to the top of the front (1) or the rear side panel (3), and a hanging tab (34) is hinged to the hanging tab (33), with each tab containing a hanging arrangement (37), an insertion tab (5) is laterally hinged to the side panel (4), and the side panel (1) features an area (13) that is to be removed via a perforation.
9. Punched blank for producing a relockable, rectangular folding box according to claim 3 corresponding to claim 8, characterized in that the hanging tab (33) is hinged via a closing flap (32) to the top of the front (1) or the rear side panel (3).
10. Punched blank for producing a relockable, rectangular folding box according to claim 4 corresponding to claim 8, characterized in that the hanging tab (34) is hinged to the closing flap (12) instead of to the tab (33).

11. Punched blank according to one of claims 7 through 10, characterized in that the dust flaps (42, 41) have edges rounded toward the side panel (1).
